

# Fluctuating Abstract ionism

Although what appears to be reality today is based on such of yesterday, there is more and more, due to the use of the ideas, material and systems that have evolved, a rather new divergence from that reality into what I see as a Fluctuating Abstract ionism.

A Fluctuating Abstract  
ionism both in the sense of  
something that exists as an  
idea and as a state of  
preoccupation.

Preoccupation being the state  
of being preoccupied or  
engrossed with something -  
deriving from anticipating  
and meeting objections  
beforehand.

This simply follows from the

great degree to which cultures  
and peoples are necessarily  
mixing in environments  
oftentimes much too close in  
proximity to each other to lead  
to anything but an extreme:

*an air of preoccupation* pensiveness, concentration, engrossment,  
absorption, self-absorption, musing, thinking, deep thought, brown  
study, brooding; abstraction, absentmindedness, distraction,  
forgetfulness, inattentiveness, woolgathering, daydreaming.

And so with this we are in an  
era of Fluctuating Abstract  
ionism

ion

noun

an atom or molecule with a net electric charge due to the loss or gain of one or more electrons.

These ions are in my definition representing individuals acting as if they are held together with a net electric charge due solely to their current preoccupation or concentration whatever that might be.
